

STREAM TREES: Our Water's Natural Defense

Delaware's Watersheds Lecture Series

Thursday, April 8, 2010 - 7 PM

DuPont Environmental Education Center

1400 Delmarva Lane on the Riverfront, Wilmington, DE

Delaware's Watersheds Lecture Series

Stream Trees: Our Water's Natural Defense

April 8, 2010 - 7PM, DuPont Environmental Education Center on the Riverfront, Wilmington, DE

For directions and more information, visit www.delawarenaturesociety.org

Many of us are familiar with tree-lined streets, but what about tree-lined streams? These "stream trees", known as riparian or forest buffers, do much more than provide a pretty scene.

Learn about riparian buffers and what you can do to help.

Dr. Bernard Sweeney, Executive Director of the internationally acclaimed Stroud Water Research Center, will discuss pioneering research on the role of streamside forests. Learn how you can make a difference by joining the Delaware Nature Society's Volunteer Riparian Habitat Assessment program.

FREE: Native tree seedlings to the first 75 attendees

Free Admission – Light Refreshments

Please RSVP by phone 302-239-2334

ext. 100 or by email
